New Look Engage v2
Atlas Knowledge’s Engage learning management system (LMS) was developed in 2013 and is used by 2,500 companies and over 800,000 users across 110 countries.

What has changed?

Modern User Interface Design

“This latest release includes infrastructure and functionality improvements, as well as some new features for 2018.”

Gareth Allan, Head of IT & Quality

Fully Responsive Interface

“We’ve made the login process easier and future proofed the system for GDPR.”

Stuart Andrew, Head of Technology and Service Delivery

What has changed?

Modern User Interface Design

“Revamped look and feel and new functionality to customise how courses are grouped together and delivered.”

Gareth Allan, Head of IT & Quality

Fully Responsive Interface

The Learner User Interface has been built in a modular framework to allow scalability and access on tablets and smartphones in addition to desktops and laptop computers.

Carousel Menu with Course Grouping (Optional Extra)

A new carousel-style menu can be customised to ease navigation. Courses can be grouped into individual carousels and arranged in order of status. Courses ‘in Progress’ are brought to the start of the carousel while those that are ‘Completed’ are moved to the end.

Create Curriculums (Optional Extra)

Combine courses to create a curriculum with a custom certificate. Selected courses are collated behind a single Course Tile which leads to a custom landing page. The curriculum can be customised to have a fixed running order or allow the user to complete in any sequence. A progress bar on the module tiles and a master progress bar for the curriculum are shown.

Simple & Secure Access

Self-Service Password Reset

If a user forgets their password, the system generates an email to verify their identity, followed by an optional security question. They are then sent an email with a unique password reset URL to gain access. This is a self-service process with no intervention required by the administrator.

GDPR Ready

All system users will be required to accept the latest Terms of Use, which can be modified to individual corporate policy. The application and delivery platforms are secure, protecting both corporate and personal data in line with GDPR guidelines.

Flash Player Check

During course launch, the system will check if Flash is required and prompt the user to either install or enable the required plugin before loading course pages.

Single Sign On (SSO) Integration (Optional Extra)

Atlas Engage can be integrated with corporate authentication providers to allow seamless access to the LMS platform. Users can launch courses directly from a link without having to log in.

More areas of the system can now be designed to a client’s brand guidelines.

Neil Ruddiforth
Lead Visual Designer

The most common user questions have been addressed with the new functionality.

Hannah Senior
Technical Support Coordinator

Brand Integration & Customisation
(Optional Extra)

Customisable Interface
Design features can be aligned to corporate brand guidelines including logos, interface colours, background images and fonts.

Feature Login Page
In line with the Learner UI the login page has been built to allow diverse screen sizes. Clients can provide a 1920x1080 custom image to replace the background of the login page.

Graphical HTML Emails
Custom-designed emails can be sent using HTML. Client branding and images can be added to personalise, integrate and authenticate notifications.

Language Packs
(Optional Extra)
System scripts are translated into 8 language preferences, which are remembered on login. The entire application (learner, administration screens and email notifications) is available in the following languages: English, German, French, Spanish, Japanese, Korean, Brazilian Portuguese and Simplified Chinese.

Administrator Tools

Licence Reporting
A licence report is included in the admin section and can be filtered depending on the specific role.

Automatic Licence Expiry
Administrators can set the expiry date for certificates. On licence expiry, any in-progress or unattempted courses will be marked as expired in Atlas Engage and become unavailable for completion. Default licence expiry of 12 months is applied to all course licences, in line with the Atlas Knowledge terms and conditions.

Course Purchasing
(Optional Extra)
The Admin can enable supplemental course purchasing on a per-company basis. The user will have the ability to add courses and curricula to their basket and purchase via the secure checkout process. Invoices are generated, emailed and stored within the LMS.

“The most common user questions have been addressed with the new functionality.”

Hannah Senior
Technical Support Co-ordinator
One of our team will be in touch to explain the process and schedule a time to migrate.

Kevin Short
Chief Executive Officer

Administrator Tools (cont.)

Workflow Builder (Optional Extra)

You can create custom assignment workflows upon certain events. For example, you can create an auto-assignment rule to re-enrol a user on a course after a certain duration to meet compliance requirements. You can assign an assessment to test knowledge retention after a period; upon a fail, you can immediately re-enrol the learner on the required training.

Learn More

If you are currently using our Engage LMS, your Atlas Knowledge Account Manager will be in touch before any changes are made to your system.

Please contact us if you would like to learn more about the new features and functionality available to you:
